PROFESSIONAL SUMMARY

Professional with strong experience of 2+ years of experience in data manipulation, statistical analysis, and visualization across retail and logistics industries. Skilled in Excel, Python, SQL, and Power BI, with a proven ability to transform complex datasets into actionable insights that improve efficiency and profitability. Experienced in building dashboards, uncovering customer trends, and optimizing operations to support data-driven decision-making. Passionate about leveraging analytics to help businesses grow, compete, and innovate.

Data Analysis Tools	<i>Microsoft Excel (Advanced), Power BI, Google Sheets.</i>
Programming Languages	<i>Python (Pandas, NumPy, Matplotlib, Seaborn), DAX</i>
Databases & SQL	<i>MySQL, Microsoft SQL Server, Big Query</i>
Visualization Tools	<i>Power BI, Tableau, Matplotlib, Plotly</i>
Other Tools	<i>Git/GitHub, Jupyter Notebook</i>

DATA ANALYTICS PROJECTS

Logistics Analytics Dashboard | Excel

Tools: Excel, Pivot Tables, and PowerPoint

- *Optimizing Logistics Operations for (Swiftlog Logistics) to deliver a data-driven analysis of delivery performance, cost, and efficiency for Swiftlog Logistics*
- This project demonstrates how data analysis transforms raw logistics data into strategic insights. By identifying inefficiencies, optimizing transport modes, and prioritizing customers, Swiftlog Logistics can reduce delays, improve efficiency, and enhance customer satisfaction in a competitive market.
- github.com/Tobby4813/Logistics-Analytics-Dashboard-Excel-Project

Sales Inventory | SQL

Tools: SQL Server, Copilot and Power point

- This project focuses on the design and implementation of a Sales and Inventory Management System using SQL.
- This project involved designing, building, and analyzing a relational database for a retail sales and inventory operation. The database models customers, suppliers, products, orders, payments, and supports a full range of business intelligence queries from basic record lookups to multi-table revenue and customer segmentation analysis.
- The project objectives were achieved, resulting in a functional database and a growing suite of analytical reports.

Hospital Readmission & Patient Outcome Analysis Dashboard | Power Bi

Tools: Power Bi, DAX, Excel and Power Point

- *The hospital dashboard provides an overview of 1,000 patients covering departmental distribution, diagnoses, length of stay, treatment cost, and readmission patterns. Overall, the data shows a hospital managing substantial patient volume, with clear opportunities to improve outcomes, reduce avoidable readmissions, and strengthen departmental performance.*
- This project points to five clear priorities: reducing readmissions (esp. Cardiology, September peaks and early-discharge risk), improving outcomes for patients 61+, fixing the cost-outcome mismatch in Surgery, Oncology & Orthopedics, and tightening resource utilization overall.
